X-RAY LUMBAR SPINE – AP AND LATERAL VIEWS

Patient Id: 1435	**Study Date & Time:** 07/11/2026 20:46
Patient Name: SHIVAM	
Age / Sex: -/Male	**Report Submit:** 07/11/2026 23:37

Technique

AP and lateral radiographs of the lumbar spine.

REPORT

Alignment: Lumbar alignment maintained without significant listhesis.
Vertebral body heights: Preserved; no compression deformity identified.

Disc spaces: Mild multilevel degenerative change, greatest in the lower lumbar levels, with small endplate osteophytes.

Posterior elements: No acute abnormality seen on these views.

Sacroiliac joints/visualized pelvis: Grossly unremarkable on the included portions.

Soft tissues: No acute paraspinal soft-tissue abnormality evident.

Impression

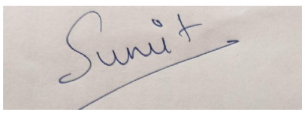

No acute osseous abnormality of the lumbar spine on AP/lateral radiographs.

Mild multilevel degenerative spondylosis, lower lumbar predominant.

ADVICE

Clinical Correlation for further evaluation
