

Patient Name	:	NARENDER KUMAR 34Y/M
Age / Sex	:	30Y / Male
Date & Time	:	2026-09-30 11:44
Referring Doctor	:	DR GET WELL
Investigation	:	MRI LUMBO SACRAL SPINE

M.R.I OF LUMBO-SACRAL SPINE

Clinical History:

LBA RADIATE TO LT L/L SINCE 2 MONTHS

Sequences:

Sagittal T1W, T2W, STIR; Axial T2W sequences.

Study reveals:

Vertebral alignment:mild straightening of lumber lordosis noted.

Vertebral body height and marrow signal:normal

ligamentum flavum hypertrophy noted at mulitple levels.

Intervertebral disc spaces :

Disc at L1-L2:normal

Disc at L2-L3:normal

Disc at L3-L4:normal

At L4-L5: significant intervertebral disc dessication and disc protrusion with bilateral ligamentum flavum hypertrophy causing complete effacement of anterior thecal sac and indentation over cauda equina nerve roots. bilateral lateral recess narrowing causing compression over traversing nerve roots. mild narrowing of bilateral neural foramina with abuttment of exiting nerve roots.

Disc at L5-S1:normal.

rest of the facet joints and posterior paraverteral soft tissue structures appear normal.

IMPRESSION:

PROLAPSED INTERVERTEBRAL DISC AT L4-L5 LEVEL CAUSING SIGNIFICANT COMPRESSION OVER CAUDA EQUINA NERVE ROOTS AND TRAVERSING NERVE ROOTS.

Clinical Advice:

CLINICAL CORRELATION FOR FURTHER EVALUATION.
