

Patient Name	:	AISHWARIYA KHURANA 33/F
Age / Sex	:	27Y / Female
Date & Time	:	2026-09-30 13:04
Referring Doctor	:	
Investigation	:	MRI LS SPINE

M.R.I OF LUMBO-SACRAL SPINE

Clinical History:

Sequences:

Sagittal T1W, T2W, STIR; Axial T2W sequences.

Study reveals:

Vertebral alignment: NORMAL.

Mild degenerative changes noted in form of marginal osteophytes.mild ligamentum flavum hypertrophy noted at mulitple levels.

Vertebral body height and marrow signal: maintained and appear normal.

Intervertebral disc:

Disc at L1-L2:normal

Disc at L2-L3:normal.

Disc at L3-L4: subtle disc bulge noted shwoing flattening of posterior aspect of IV disc without causing any compression effects.

Disc at L4-L5:mild diffuse disc bulge with disc dessication noted, causing mild effacement and indentation over anterior theca sac with ligamentum flavum hypertrophy causing mild narrowing of left lateral recess and abutting left traversing nerve roots.

Disc at L5-S1:normal.

Spinal cord ends at D12-L1 level, conum medullaris noted at L1 vertebral level

Facet joints: normal

Paraspinal soft tissues: normal

IMPRESSION:

Mild degenerative changes as described.

At L4-L5:mild diffuse disc bulge with disc desiccation noted, causing mild effacement and indentation over the anterior theca sac with ligamentum flavum hypertrophy causing mild narrowing of left lateral recess and abutting the left traversing nerve roots.

Clinical Advice:

Clinical correlation for further evaluation
