X-RAY CHEST – PA VIEW

Technique:

Single frontal PA radiograph of the chest.

Findings:

Mild bilateral perihilar/peribronchial interstitial prominence.

Thin linear opacity in the left mid-lung compatible with subsegmental atelectasis and/or fissural thickening.

No focal lobar consolidation.

Trachea is central.

Cardiomediastinal silhouette is within normal limits.

Bilateral hilar shadows are unremarkable.

Costophrenic angles are clear.

No pleural effusion or pneumothorax.

Visualized osseous structures show no acute abnormality.

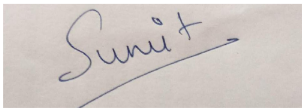

IMPRESSION:

- **Mild bilateral perihilar/peribronchial interstitial prominence.**
- **Thin linear opacity in the left mid-lung compatible with subsegmental atelectasis and/or fissural thickening.**

Clinical Advice:

HRCT thorax and Clinical Correlation for further evaluation
