

Patient Name	:	SANTOSH 65/F
Age / Sex	:	- / Male
Date & Time	:	2026-10-01 16:01
Referring Doctor	:	SLEF
Investigation	:	ncct kub

C.T. CHEST & ABDOMEN

Clinical History:
ABDO PAIN BURNIG IN URIN

Technique:
Axial CT sections with coronal and sagittal reconstructions.

Study reveals:
NCCT KUB reveals

Evidence of right ureteric calculus of size approx. 13x 9x7.6mm noted at the junction of mid and lower right ureter, causing signifcant right hydroureteronephrosis changes with significant cortical thinning.

Exophytic right renal cortical cyst of size approx. 31.9x31.9mm noted at lower pole region.

Left kidney appears normal in size, shape and density.

Urinary bladder: distended and showing diffuse UB wall thickening, max thickness approx. 7mm.

uterus and bilateral adnexa appears grossly normal.

mild degenerative changes in spine noted.

visualised bowel loops appears normal.

no evidence of free fluid noted.

IMPRESSION:
Evidence of right ureteric calculus at the junction of mid and lower right ureter, causing signifcant right hydroureteronephrosis changes with significant cortical thinning.
Exophytic right renal cortical cyst at lower pole region.

Clinical Advice:
clinical correlation and follow up. advise for PCN catheterisation.
