XRAY CHEST

Patient ID: 1872	**Age / Sex:** / Female
Patient Name: RAGINI KUMARI	**Study Date:** 2026-10-22T12:39:48
Referring Doctor:	

REPORT

- Ill-defined area of airspace opacity is seen in the right upper and mid lung zones, with mild associated volume loss, evidenced by minimal crowding of ribs and upward displacement of the right hilum.
- Left hilum appears mildly bulky.
- Rest of the bilateral lung parenchyma appears clear.
- Bilateral costophrenic angles are clear.
- Cardiac silhouette is normal in size and configuration.
- Visualized bony thorax appears unremarkable.

IMPRESSION

1. Ill-defined airspace opacity in the right upper and mid lung zones with mild associated volume loss, suggestive of infective etiology.
2. Mild prominence of the left hilum.

ADVICE

Clinical correlation and follow-up chest radiograph are advised.
